NGS CONTROL

ELEV_ORDER

- 1st Order
- 2nd Order
- ★ Eloy Height Mod Points (NAD83/US 2007)

NOTE

The Geodetic control points shown here represents Vertical control points in the National Geodetic Survey database. Some points may not exist. Preference should be given to those whose elevation (orthometric height) is directly tied to the NAVD88 vertical datum by differential levelling. Due to possible subsidence, extra care should be taken when selecting benchmarks for project control.

Datasheets for these points are available at the NGS web site, www.ngs.noaa.gov, or at the State Cartographers Arizona GeoServer web site, sco.az.gov/web/site/geoserver

Update April 2007: The new Height Modernization Control points have not been officially "Bluebooked" into the National Spatial Reference System (NSRS) and are not available from NGS. Interim values can be obtained from the City of Eloy or from Psomas. For more information please contact Pat McGarity at 520-292-2300
